

Declaration of interest in the SoMExNet network

To join the “European Network of the SoMExNet Mobile Application Users”

The SoMExNet mobile application, created as part of the European project of the same name (2017-1-BE01-KA202-024739), aims to facilitate the mobility of young people and staff in Europe. To this end, the project consortium has chosen to use new technologies, which are omnipresent in the lives of mobility participants. Thanks to this mobile application, learners and staff are involved in all stages of mobility, from its preparation to its completion, also allowing real-time communication between participants.

What is the SomexNet network and what are its objectives?

The specific objective of the SomexNet Network is to expand the number of user institutions of the SoMExNet mobile application in order to increase the number of mobility across Europe in the construction sector. To do this, the project consortium developed tools and a process to make the application available and usable by any institution in the construction sector requesting it through the form below.

What are the requirements for network members?

- Promote the SoMExNet application and the SoMExNet network at local, regional, national and European level in order to extend it;
- Participate in discussions and share information, knowledge and expertise with other Network members;
- Provide feedback on the experience of using the application and its tools for continuous improvement;
- Participate in the exchange and transfer of expertise, experience and good practices, both within and outside the Network, for example through participation in events or the dissemination of the project and of the existence of the Network.

If you wish to join the Network, please complete the form below and return it to the project promoter. If you wish to use the SoMExNet application and its content, all necessary materials will be sent to you after your request to join the network is accepted.
